INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits, and ^{2500 seeds}~~\$250.00~~ fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, National Agricultural Library, Beltsville, Maryland 20705. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Give the date the applicant determined that he had a new variety based on (1) the definition in Section 41(a) of the Act and (2) the date a decision was made to increase the seed.
- 13a Give (1), the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. (2), the details of subsequent stages of selection and multiplication. (3), the type and frequency of variants during reproduction and multiplication and state how these variants may be identified and (4), evidence of stability.
- 13b Give a summary statement of the variety's novelty. Clearly state how this novel variety may be distinguished from all other varieties in the same crop. If the new variety most closely resembles one or a group of related varieties; (1) identify these varieties and state all differences objectively; (2) Attach statistical data for characters expressed numerically and demonstrate that these differences are significant; and (3) submit, if helpful, seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty.
- 13c Fill in the Exhibit C, Objective Description form for all characteristics, for which you have adequate data.
- 13d Describe any additional characteristics that are not described, or whose description cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the description of characteristics that are difficult to describe; such as; plant habit, plant color, disease resistance, etc.
- 14A If "YES" is specified (seed of this variety be sold by variety name only as a class of certified seed) the applicant may NOT reverse his affirmative decision after the variety has either been sold and so labeled or published or the certificate has been issued. However, if the applicant specifies "NO", he may change his choice. (See Section 180.15 of the Regulations and Rules of Practice.)

Origin and Breeding History of Variety

1. Original selection was found as a mutant (or possibly an outcross) in one of our own fields of a variety called 'Gold Rush'. The original plant was given the number 7630 and was lifted to the greenhouse and selfed in late 1974.
2. Seed of the above selection was planted again in our greenhouse during the winter months of 1974/75 and ten single plant selections were made in the line. These were planted outdoors in the summer of 1975 and two of these lines proved to be quite uniform for height, type and color. Ten selections were made in each of these lines and planted again in 1976. One of these selections numbered 8604 proved to be early and very uniform for height and color. All plants of this line were dug and potted in our greenhouse and subsequently mass pollinated. This seed was used for the All America trials in 1977 and to plant a one acre stock seed increase at our ranch in Baja, California. This seed is being used to plant a production field in Lompoc this year.
3. In the early stages there was variation for height and flower size but color has been fairly uniform. Like all open pollinated Marigolds, there is a small amount of variation for height and color. I have noted less than 1% taller plants in various trials. Color is very uniform early in the year but later on (especially under very warm conditions) the red and orange coloring will fade and merge to some extent. Under cool conditions (as at Lompoc, California) the color is very stable.
4. 'Harmony Boy' was entered in the 1977 All America Trials. It gained high points for its uniformity and placed in the top eight varieties out of 44 entered. I would consider it as stable as any other French Marigold. All of these have to be constantly maintained from single plant selections and/or foundation stock seed increases in order to keep up their characteristics true to type.

MARIGOLD HARMONY BOY

Exhibit B

Novelty Statement

1. 'Harmony Boy' is earlier to bloom (3 - 4 days), dwarfer and larger flowered than the nearest comparison variety 'Petite Harmony'. This variety is a much better performer in packs and flats than the comparison (see photo taken at the Ball Trials in West Chicago). This variety performs better than the comparison outdoors under adverse weather conditions.
2. Color print enclosed showing 'Harmony Boy' compared to 'Petite Harmony'. This photo was taken in May 1977 at the Ball Seed Company in West Chicago.

Additional Description of Variety

Marigold 'Harmony Boy' is another addition to a series represented by 'Golden Boy' and 'Yellow Boy' (P.V.P. 7600034). Plant type and flowering time is similar to the above varieties. Closest comparisons are 'Petite Harmony', 'Gypsy Dancer', 'Gold Rush' and 'Butterscotch'. It is larger flowered, dwarfer and earlier than 'Petite Harmony'. It is earlier flowering than the other three varieties mentioned and dwarfer in plant habit. Flower size is not quite as large as 'Gypsy Dancer', 'Gold Rush' or 'Butterscotch'.
